

NavGuard · TimeGuard · SessionGuard

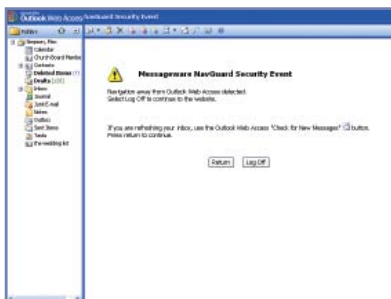

Prevent unauthorized access to OWA sessions

Messageware TimeGuard, NavGuard and SessionGuard prevent users from leaving active OWA sessions accessible to unauthorized users.

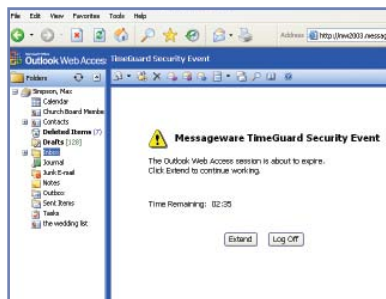

Messageware TimeGuard provides a user-friendly session inactivity prompt shortly before the user reaches the session inactivity limit or maximum session limit, with the option to either extend the session or logout. Messageware NavGuard prompts an OWA user that created a security vulnerability by navigating away from an active OWA session without logging off. Messageware SessionGuard blocks the reuse of login credentials after users exit Outlook Web Access.

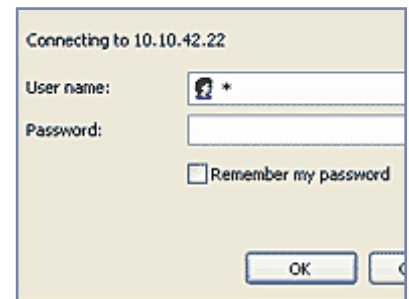

Security Features

NavGuard warning requires the user to either logoff before continuing to another web page, or return to OWA

TimeGuard prompts the user to extend the OWA session or log out and provides a maximum session timeout option

After pressing the back button, the user is prompted to re-authenticate
