

# TimeGuard 2007

## Prevent Unauthorized Access to OWA Accounts

### TimeGuard 2007 – User-friendly OWA Session Inactivity Security

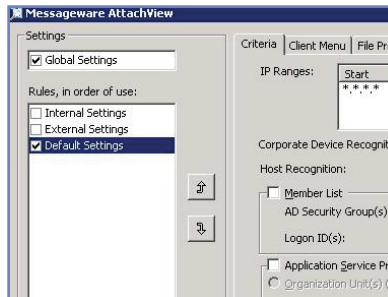

TimeGuard protects users from leaving active OWA sessions accessible to unauthorized users. TimeGuard provides a user-friendly prompt shortly before the user reaches the session inactivity limit, giving him the option to either extend the session or logout. TimeGuard also provides a maximum timeout option which requires users to re-authenticate after a predefined maximum session time has passed. Extend the security provided by ISA and forms based authentication (FBA) to offer total protection for OWA users.

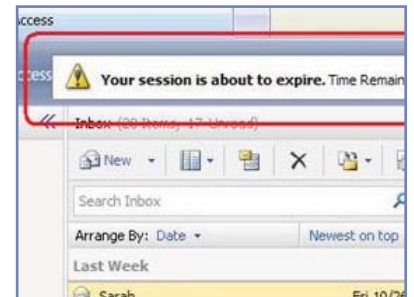

## Security Features

TimeGuard prompts a user when they have exceeded their session inactivity limit with the opportunity to extend or log off.

Exchange System Administrators can customize settings according to their corporate policies, user's hardware and current locations (zones, groups, CDR, etc.)

TimeGuard provides a maximum timeout option which requires users to re-authenticate after a predefined maximum session time has passed.
