

# Outlook Web App/Access Productivity and Security Messageware AttachView

## Secure Access to OWA Attachments

AttachView offers secure Web Access to OWA attachments by converting attachment files into secure web pages that are not stored on the local computer. Outlook Web App/Access Security that installs in minutes, is easy to administer and is intuitive and easy to use.

AttachView extends and enhances WebReady Document Viewing with over 400 file types, and gives Exchange Administrators complete control over security settings such as the user's ability to view, open, print and save documents. AttachView also adds advanced features such as the ability to view files without the native application loaded on the computer, viewing Word documents with Track Changes or Revision Summary, as well as faster attachment viewing, making it easier for users to work with documents from any location.

**Prevents Data Exposure** that could occur when viewing attachments in OWA by ensuring no files are transferred to the computer. Attachments are protected by converting documents into secure HTML pages which are not stored on the local computer.

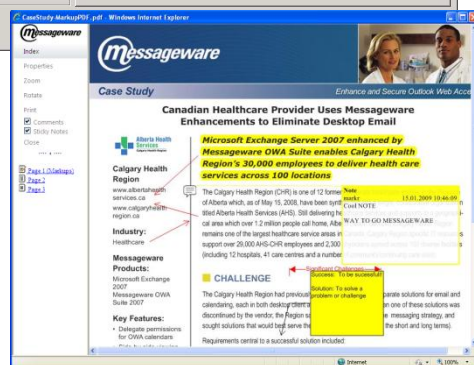

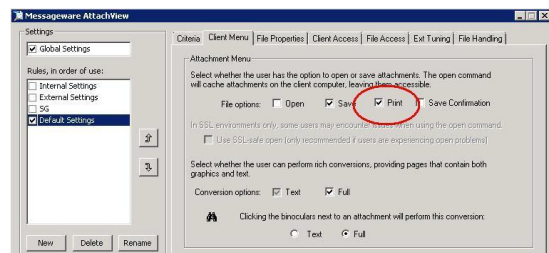

**Secures Attachments for Over 400 File Formats** including Microsoft Office documents, eliminating the need to purchase and install the applications; expanding on Microsoft's WebReady Document Viewing.

**Secure All Attachments Everywhere;** in the Inbox, Contacts, Calendar, SharePoint folders, internal server shares, and Public Folders.

**Control a User's Ability to Open/View/Print** an attachment. Exchange Administrators can customize security settings on a granular level based on users, groups, IP addresses and corporate devices

**Fastest Attachment Conversion** available. Single instance store results in less strain on the server than OWA without AttachView

Messageware AttachView is available for Exchange Server 2003, 2007 and 2010
