

Outlook Web App/Access Productivity and Security Messageware NavGuard

Prevent unauthorized access to OWA accounts

NavGuard protects OWA sessions with a friendly prompt which alerts the user to a security exposure that could occur when the user leaves the current OWA session active and surfs to a new page. NavGuard requires the user to either log off before continuing to another website, or return to the current active OWA Session.

NavGuard works closely with other security products such as ISA and RSA, to provide a complete security solution. These authentication and security products secure the infrastructure and perimeter of networks; the point at which passwords or tokens are collected; Unfortunately they don't specifically address Web mail applications such as OWA. NavGuard is designed to work with OWA to provide critical security beyond the capability of these products by monitoring when a user has navigated away from an active OWA session and ensuring that the session is not inadvertently left active for the next user to hijack. Security settings can be configured based on users, groups, IP addresses and corporate devices.

Logoff from OWA Required if a user wishes to browse to another page as NavGuard monitors OWA usage and identifies when a user is creating security vulnerability by navigating away from an active OWA session

Navigation is Detected if the user browses away by entering a URL into the address bar, presses the home button, the back button, or clicks on refresh

Prevents Unauthorized Individuals from accessing corporate information, simply by hitting the 'back' button on a screen where the previous user didn't log out

ISA & RSA Compatibility We work closely with other perimeter based security products such as ISA and RSA two factor authentication to provide a complete security solution.

Customizable Security Policies NavGuard can be configured by the Exchange Systems Administrator to apply different security policies based on criteria such as logon ID or Security Group membership, IP address and Corporate Device Recognition
