

Top Security Features:

- Protect against threats including brute force, password spray, and dictionary attacks.
- Prevent Active Directory lockouts
- Secure what 2FA/MFA leaves vulnerable
- Detect and report suspicious login activity
- Customizable login policies and security checks
- Dynamic CAPTCHA
- Reduce the load on your support desk

Messageware Exchange Protocol Guard Exchange 2016

Essential security for enterprises with Microsoft Exchange

“ EPG’s constantly monitoring connections and logins from all over the world. It would be impossible for my team to filter all the data without this tool. - Healthcare

Messageware Exchange Protocol Guard is unique Exchange security that provides on-premise users with logon intelligence and security controls for six of the most widely used Exchange Server services, including Outlook Web, ECP, Autodiscover, ActiveSync, and EWS. EPG is a critical addition for all enterprises including those partially protected by multifactor authentication (MFA/2FA).

EPG offers advanced Exchange Server security to protect organizations from a variety of logon and password attacks, in addition to extensive real-time reporting and alerts of suspicious logon activity. EPG includes a sophisticated set of access controls and real-time monitoring of potential risks. EPG user and system alerts, combined with in-depth analytical reporting is a complete access security intelligence solution.
