Messageware Z-Day Guard
for Microsoft Exchange Servers

Exchange Servers are under attack! Add advanced Z-Day server protection to detect changes in the trusted Exchange Server environment that indicate attacks by zero-day, webshell, and other exploits. Best of all, Z-Day's embedded monitoring technology cannot be turned off by malicious software.

Highlights:

- ✓ Zero-Day Detection
- ✓ Catch Exploits
- ✓ Managed Detection (MDR)
- ✓ Post-Incident Forensics
- ✓ SIEM/SYSLOG and Email Alerting
- ✓ Always-on, Cannot be Disabled

Next-Generation Threat Detection

Exploits prey on unpatched Exchange Servers and vulnerabilities not yet known to the public. Next-generation protection starts with understanding the server's purpose and establishing a trusted system state.

Messageware Z-Day Guard
for Microsoft Exchange Servers

File Integrity Monitoring (FIM)
Track unexpected changes to the file system and trigger threat alerts categorized by severity.

vDir Integrity Monitoring
Instantly detect changes to Virtual Directories that can compromise Microsoft Exchange Servers.

Detailed Data Visualizations
Easily identify hot spots and trends by displaying historical threat data in a bubble chart, or drill into detailed incidents over time using tree view.

SYSLOG & SIEM Integration
Send alert events and threat data to existing SIEM and SYSLOG servers using standardized RFC 3164 and RFC 5424 messages.

Notifications & Daily Digests
Receive real time threat alerts and notifications, and daily Exchange Server health summaries.

Maintenance Mode
Just like Exchange itself, Z-Day can be put in maintenance mode to quickly update, then re-establish a trusted baseline.

Time to React
Compromised servers are leveraged in under 90 minutes. Z-Day catches threats and sends alerts to respond long before this threat window closes.

Certified PPL ELAM Mode
Z-Day is a certified PPL ELAM driver, ensuring that it is monitoring your system from startup to shutdown.

Server Baseline Change → Risk Analysis → SYSLOG & SIEM Notifications → View Detailed Threat Data → Remediation → Analytics and Reporting

> " Save hundreds of hours checking system health. Z-Day vastly reduces your effort and provides confidence that your servers have not been compromised.
