Messageware AttachView
Exchange 2016
Secure Access to Outlook Web Attachments

AttachView secures attachments in Outlook Web App by converting attached files into secure web pages.

AttachView extends and enhances WebReady Document Viewing from the standard 4 file types to over 400 file types, and gives Exchange Administrators complete control over security settings, such as the user's ability to view, open, print, and save documents.

AttachView adds advanced features such as the ability to view files without the native application loaded on the computer, viewing Word documents with Track Changes or Revision Summary, as well as faster attachment viewing, making it easier for users to work with documents on any device running OWA from any location.
